#### **Exercises 17 Definite integral** Definite integral, area under a curve, consumer's/producer's surplus

### Objectives

- be able to apply the fundamental theorem of calculus.
- be able to determine a definite integral of a constant, basic power, and basic exponential function.
- be able to determine the area between the graph of a basic power function and the abscissa.
- be able to determine a consumer's and a producer's surplus if the demand and supply functions are basic power functions.

### Problems

- 17.1 Calculate the definite integrals below:
  - b)  $\int_0^1 (x^3 + 2x) dx$  c)  $\int_{-5}^{-3} \left(\frac{x^2}{2} 4\right) dx$  $\int_{2}^{4} (2x - 5) dx$ a) f)  $\int_{-1}^{1} e^{x} dx$
  - e)  $\int_{-2}^{2} \left( 2x^2 \frac{x^4}{8} \right) dx$  $\int_{2}^{4} \left( x^{3} - \frac{x^{2}}{2} + 3x - 4 \right) dx$ d) h)  $\int_{-1}^{1} e^{-3x} dx$
  - $\int_0^1 e^{2x} dx$ g)
- 17.2 Determine the area between the graph of the function f and the x-axis on the interval where the graph of f is above the x-axis, i.e. where  $f(x) \ge 0$ .
  - $f(x) = -x^2 + 1$  $f(x) = x^3 - x^2 - 2x$ a) b)
- 17.3 The demand function (price in CHF) for a product is  $p = f(x) = 100 - 4x^2$ . If the equilibrium quantity is 4 units, what is the consumer's surplus?
- 17.4 The demand function (price in CHF) for a product is  $p = f(x) = 34 - x^2$ . If the equilibrium price is 9 CHF, what is the consumer's surplus?
- 17.5 The demand function (price in CHF) for a certain product is  $p = f(x) = 81 - x^2$ and the supply function (price in CHF) is  $p = g(x) = x^2 + 4x + 11.$

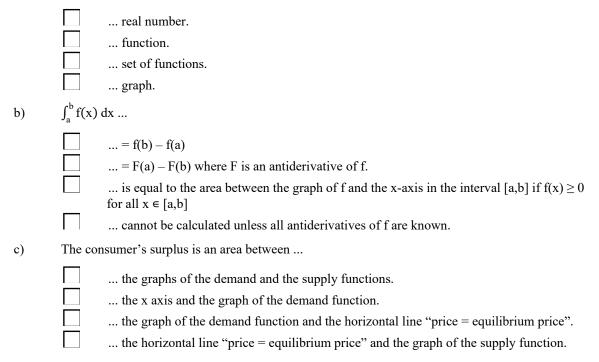

Determine ...

- ... the equilibrium point, i.e. the equilibrium quantitiy and the equilibrium price. a)
- b) ... the consumer's surplus at market equilibrium.
- c) ... the producer's surplus at market equilibrium.
- 17.6 Suppose that the supply function (price in CHF) for a good is  $p = g(x) = 4x^2 + 2x + 2$ . If the equilibrium price is 422 CHF, what is the producer's surplus?

17.7 The demand function (price in CHF) for a certain product is  $p = f(x) = 144 - 2x^2$ and the supply function (price in CHF) is  $p = g(x) = x^2 + 33x + 48$ 

Determine the producer's surplus at the equilibrium point.

- 17.8 Decide which statements are true or false. Put a mark into the corresponding box. In each problem a) to c), exactly one statement is true.
  - a) The definite integral of a function is a ...

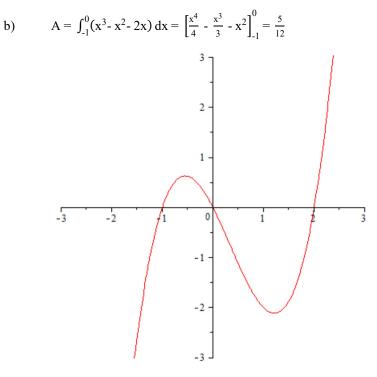

# Answers

17.1 a) 
$$\int_{3}^{4} (2x - 5) dx = [x^{2} - 5x]_{3}^{4} = (4^{2} - 5 \cdot 4) - (3^{2} - 5 \cdot 3) = 2$$
  
b)  $\int_{0}^{1} (x^{3} + 2x) dx = \left[\frac{x^{4}}{4} + x^{2}\right]_{0}^{1} = \left(\frac{t^{4}}{4} + 1^{2}\right) - \left(\frac{0^{4}}{4} + 0^{2}\right) = \frac{5}{4}$   
c)  $\int_{3}^{-3} (\frac{x^{2}}{2} - 4) dx = \left[\frac{x^{3}}{6} + 4x\right]_{-5}^{-3} = \left(\frac{(3)^{3}}{6} - 4 \cdot (-3)\right) - \left(\frac{(5)^{3}}{6} - 4 \cdot (-5)\right) = \frac{25}{3}$   
d)  $\int_{2}^{4} (x^{3} - \frac{x^{2}}{2} + 3x - 4) dx = \left[\frac{x^{4}}{4} - \frac{x^{3}}{6} + \frac{3x^{2}}{2} - 4x\right]_{2}^{4} = \left(\frac{4^{4}}{4} - \frac{4^{3}}{6} + \frac{34^{2}}{2} - 4\cdot4\right) - \left(\frac{2^{4}}{4} - \frac{2^{3}}{6} + \frac{32^{2}}{2} - 4\cdot2\right) = \frac{182}{3}$   
e)  $\int_{2}^{1} 2(2x^{2} - \frac{x^{4}}{8}) dx = \left[\frac{2x^{3}}{3} - \frac{x^{2}}{9}\right]_{2}^{2} = \left(\frac{2x^{3}}{2} - \frac{2x}{4}\right) - \left(\frac{2(2x)^{3}}{4} - \frac{(2x)^{3}}{4}\right) + \frac{(2x)^{3}}{40} + \frac{(2x)^{3}}{4} + \frac{($ 

b) (see next page)

-2

## Hints:

- First, determine the positions x where the graph of f intersects the x-axis, i.e where f(x) = 0
- Then, determine the interval on which the graph of f is above the x-axis, i.e. where  $f(x) \ge 0$

17.3	Consumer's surplus		CS = 170.67 CHF (rounded)	
17.4	Consumer's surplus CS =			3.33 CHF (rounded)
17.5	a)	Equilibrium quantity Equilibrium price		x = 5 p = 56 CHF
	b)	Consumer's surplus		CS = 83.33 CHF (rounded)
	c)	Producer's surplus		PS = 133.33 CHF (rounded)
17.6	Producer's surplus		PS = 27	766.67 CHF (rounded)
17.7	Producer's surplus		PS = 103.34 CHF (rounded)
